Application for the [Role] position

Dear [Hiring manager / Hiring team],

I build and run a marketplace on my own. VandiZone lets people hire JCBs, cranes and goods trucks, and I am the only developer on all four of its surfaces: the customer app, the app its drivers and fleet owners use, the office console the business is run from, and the public website. I am writing because I would like to bring that kind of ownership to the [Role] role at [Company].

VandiZone taught me what it costs to own a product rather than a ticket. The dispatch engine only offers a job to a driver who is on duty, verified, in range and whose machine actually fits the load. Work is proved on site rather than trusted, through staged codes, photos and weighbridge slips. There are two pricing engines, one hourly and one a blind auction where drivers bid, and money runs through Razorpay, wallets, commission and payouts, with GST invoicing and cancellation terms frozen onto each booking so a later price change cannot rewrite an old one. When drivers told me jobs were not ringing on their phones, I built a diagnostic that test-rings an offer and audits Do Not Disturb, battery saver and the push connection. Nobody filed that as a requirement; the problem was mine because the product was mine.

My day job gives me the other half of that picture. At Massclick I built the Flutter app from its first commit to version 2.1.1 on Android and iOS, and I work across the Node and MongoDB API, the React platform and the Linux servers underneath. I built the search engine behind every query, ranking roughly 18,300 locations and 11,000 businesses, and moved every production database to a dedicated server with about ninety seconds of downtime. When an attacker began farming our OTP endpoint for SMS payouts, I cut it off at the edge within minutes and rebuilt the defence, so the same attack now costs us nothing. Before Massclick I led mobile development at Digihope Technologies for a year.

[Two or three sentences on why this company: what they build, which part of it you want to work on, and the specific thing in your experience that maps to it. This is the paragraph that gets you read — keep it concrete and do not reuse it between applications.]

My résumé and a fuller CV are attached, and my work is written up at abishek.wiozen.in/portfolio. I would welcome the chance to talk about what you are building and where I would fit.

Yours sincerely,

M.K. Abishek
